Fall Color:	purple-red
Flowers:	pink
Fruit:	drupe
Zone:	3

DESCRIPTION

Prized for its deep purple-red foliage, Sandcherries are a mainstay in landscape designs.

Small pinkish flowers are produced in spring and are sweetly fragrant. The main attribute, its intense foliage color, does not fade and remains attractive throughout the growing season. Sandcherries will grow quickly, and respond well to regular shaping and pruning.

Sandcherries are nice planted in shrub borders, in foundation plantings, or as a single colorful accent in the garden.
