

Pussy Willow

Salix discolor

SPECS

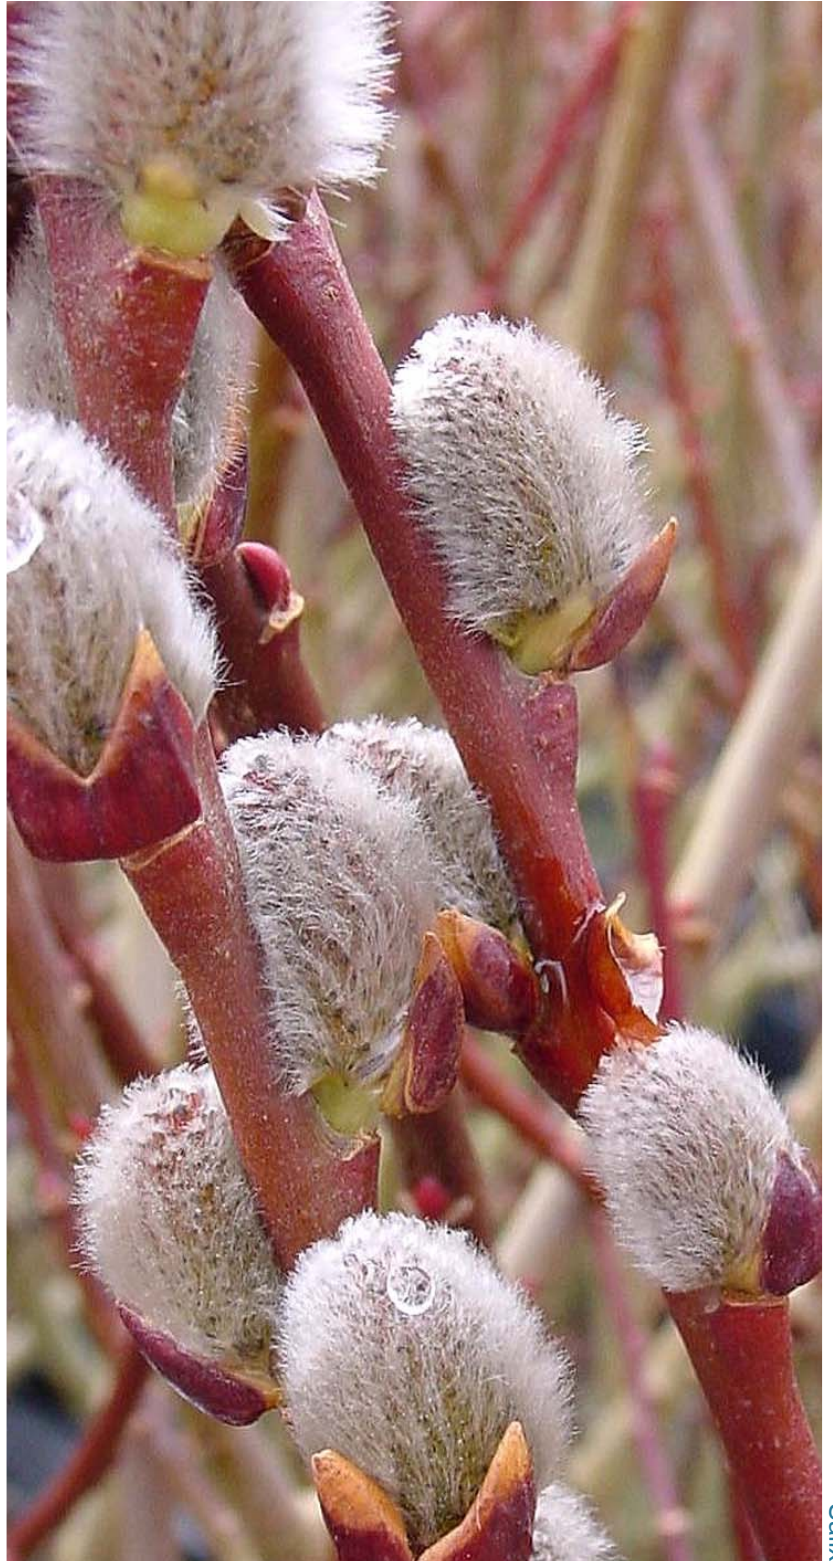

Height:	20'
Spread:	15'
Shape:	upright
Foliage:	green
Fall Color:	golden yellow
Flowers:	catkins
Fruit:	insignificant
Zone:	5

DESCRIPTION

Native to much of the Eastern United States, Pussy Willows are grown primarily for their large showy catkins, which are produced in early spring. The silvery catkins appear along the stems and are silky to the touch. The stems are useful for cutting for indoor arrangements.

Pussy Willow will grow in a wide range of soils, and is one of the few plants that will grow well in low-lying and poorly drained, wet areas.

Utilize along ponds or streams, or plant in average soil as a background plant.
