

APPLE

0309 - Malus 6 in 1 - medium/sweet A vibrant mix of sweet & crisp - Ripe: Sept.
0107 - Malus Buckeye Gala® - fresh/crisp #10 SD - <b>NEW!</b> poll. - Granny Smith, Honeycrisp - Ripe: mid/late Aug.
0257 - Malus Golden Delicious™ - sweet #10 SD poll. - self fert. - Ripe: Oct.
0267 - Malus Honeycrisp™ - sweet #10 SD poll. - Red Delicious, Fuji, Granny Smith - Ripe: late Sept.
0330 - Malus KinderKrisp - sweet/red-snack size #10 SD poll. - Yellow Delicious - Ripe: late Aug.
0273 - Malus McIntosh - tart #10 SD poll. - Fuji, Gala, Granny Smith - Ripe: mid Sept.
0314 - Malus Pink Lady - sweet/tart #10SD poll. - self fert. - Ripe: Oct
0165 - Malus Tasty Red™ - juicy/sweet #10 SD - <b>NEW!</b> poll. - Buckeye Gala®, Cortland - Ripe: mid Sept.
0214 - Malus Winecrisp - fruity/sweet #10 SD poll. - Fuji, Gala, Granny Smith - Ripe: Oct.

0043 Malus Ambrosia - crisp/sweet #10 SD - <b>NEW!</b> poll. - Granny Smith, CandyCrisp® - Ripe: Sept.
0263 - Malus Cortland - tart #10 SD poll. - Granny Smith, Braeburn - Ripe: Sept.
0120- Malus Golden Treat™ - #10 SD - <b>NEW!</b> poll. - Yellow Delicious, Honeycrisp - Ripe: late Aug.
0320 - Malus Jonagold—sweet/sharp #10 SD - <b>NEW!</b> poll. - Gala, Golden Delicious - Ripe: mid Sept.
0300 - Malus Liberty - sweet/tart blend #10 SD poll.- Cortland/Granny Smith - Ripe: early Sept.
0259 - Malus Norland - sweet/crisp #10 poll. - Granny Smith, Fuji, Gala - Ripe: late Aug.
0279 - Malus Royal Gala™ - sweet #10 SD poll. - Yellow Delicious - Ripe: early Aug.
0184 - Malus Wealthy - tart/strawberry-like flavor #10 SD poll. - Fuji, Gala, Granny Smith - Ripe: Sept.
0317 - Malus Winter Banana - faint banana flavor! #10SD - <b>NEW!</b> poll. - Gala, Golden Delicious - Ripe: late Oct.

Apple trees need full sun and good air circulation. They prefer soil with texture of sandy loam to a sandy clay loam. Good drainage and pH near 6.5. (SD=semi-dwarf)

ASPARAGUS

5423 - Asparagus Mary Washington #1  
long, thick green spears

5149 - Asparagus Purple Passion #1  
tender, sweet-deep burgundy spears

Asparagus grows in any soil with good drainage (pH 6.5-7.5) Will not do well with pH 6.0 or less. Do not harvest during planting year. Spears will be produced from expanded buds on the crown.

BLACKBERRY

1817 - Rubus Black Satin #1  
thornless, sweet, semi-erect

1965 - Rubus Chester Thornless #1  
med sweet, semi-erect

1820 - Rubus Columbia Giant #1  
thornless, sweet, firm, trailing

Blackberries grow best in full sun, most are self-fruitful (you only need one cultivar for fruit). Plant five or six to produce enough berries for a family of four. Thrives in fertile, well-drained and slightly acidic soil (pH 5.5-7).

BLUEBERRY

1918 - Vaccinium Bluecrop #TR1  
mid season, light blue, cold hardy, highbush

1919 - Vaccinium Duke #TR1  
early season, light blue, highbush

1920 - Vaccinium Jersey #1 - **NEW!**  
late mid-season, light blue fruit, showy reddish stems in winter

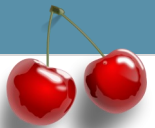

1946 - Vaccinium Top Hat TR1, #1  
small blue fruit, sweet, dwarf, highbush

Blueberries require full sun, grow best where the soil is very acidic (pH 4.5-5) and well supplied with moisture. Space 3-4 ft. across. Most are self-pollinating, but it is beneficial to plant your bushes so they can cross-pollinate with one another.

## CHERRY

0447 - Prunus Bing (tart) #10  
red, sweet, juicy cherry - poll: Black Tartarian or Rainier

0403 - Prunus Black Tartarian #10  
purple-black, sweet, juicy cherry - poll: Bing

0467 - Prunus Montmorency (tart) #10  
red, tart pie cherry - self-fertile

0406 - Prunus North Star (sour) #10  
sour cherry - self-fertile

0434 - Prunus Stella (sweet) #10  
sweet, black cherry - self-fertile

0477 - Prunus Sweet Cherry Pie (sour) #10  
very sweet pie cherry - self-fertile

Sunny, well-drained soil. Do not leave leaves or old fruit on ground as this results in brown rot. Good air circulation. (SD=semi-dwarf)

## HORSERADISH

5983 - Armoracia rusticana #1  
pungent herb grown for its roots (perennial)

Vigorous, spreading habit particularly if the roots are not harvested every year.

## NECTARINE

0679 - Prunus Mericrest #10 SD  
yellow flesh, tart nectarine

Freestone nectarines with bright yellow flesh and fuzzless, yellow skin blushed with red

## PEACH

0461 - Prunus Bailey Hardy Peach #10  
self-fertile, freestone - mid August

0337 - Prunus Elberta - Hardy Peach #10 SD  
self-fertile, freestone - mid/late August

0398 - Prunus per. Red Haven #10  
self-fertile, freestone - July/August

0471 - Prunus Reliance #10  
self-fertile, freestone - mid August

Peach cultivars do not require cross pollination—they set crops with their own pollen. They require full sun and they thrive at high elevation so that the cold air can drain away from the tree on a cold night during bloom. (SD=semi-dwarf)

## PLUM / PRUNE

0453 - Prunus Blackice #10  
poll: Toka - yellow freestone - Aug.

0416 - Prunus LaCrescent #10  
poll: Toka - yellow freestone - Aug.

0397 - Prunus Toka #10  
poll: Superior-red cling-stone - Aug.

Be sure to plant more than one type of plum as plums require cross-pollination to produce fruit. Plant in well-drained, moderately fertile soil in full sun. Avoid planting in low areas where frost may settle.

## RASPBERRY

1810 - Rubus idaeus Heritage #1  
self-pollinating, mid July, medium, sweet

1972 - Rubus idaeus Kokanee #1  
self-pollinating, Sept/Oct, firm, sweet

1808 - Rubus idaeus Meeker #1  
self-pollinating, Sept/Oct, firm, very sweet

1823 - Rubus idaeus Vintage #1  
self-pollinating, late, extra large, super sweet

1818 - Rubus idaeus Willamette #1  
self-pollinating, mid July, medium, slightly tart

Plant raspberries in full sun, on ridges or in raised beds if drainage is a problem. Avoid planting them within 300' of any wild blackberries or raspberries and in areas where tomatoes, potatoes or eggplants have previously grown. Plant in early spring.

## RHUBARB

5982 - Rheum Chipmans Canada Red #1  
sweet, red (perennial)

A rugged, cold-hardy perennial that grows best when there's enough winter to force plants into dormancy. Thrives in full sun. Can be invasive. Plant root cutting at 45 degrees with top of cutting 2 inches below soil line.

## STRAWBERRY

5700 - Fragaria Ozark Beauty #1  
Two crops - early summer - very sweet  
Ripens late spring/early summer

Fragaria (Strawberry) - Easy to grow and care for! Plant in spring, giving room for runners by planting them 18" apart. Give them 8+ hours a sun and plant them in slightly acidic, organic soil with a pH of 5.5 - 6.8. Harvest in the morning and refrigerate right away.
